

# #1 Software for Data Storage, Backup & Business Continuity

**Open-E JovianDSS** is a ZFS- and Linux-based Data Storage Software designed especially for enterprise-sized Software Defined Storage environments. With its unique features, the product ensures highest data reliability and integrity with optimal data storage, protection and recovery. The software addresses the needs of Enterprises, SMB users, Data Centers and Cloud Providers seeking a unified NAS and SAN solution with On- and Off-site Data Protection, consistent Snapshots, Thin Provisioning, Compression, Deduplication and more.

## OPEN-E JOVIANDSS ENTERPRISE-GRADE BENEFITS

### ✓ High Availability

Active-Active or Active-Passive dual node HA Cluster for iSCSI / NFS / SMB over Ethernet, Fibre Channel and SAS

### ✓ Data Protection

On- and Off-site Data Protection, offering built-in backup of everything and instant Disaster Recovery, as well as multiple backup destinations with user-defined Interval-Retention plans

### ✓ Reliability and redundancy

Atomic Transaction Writes, Data and Metadata Checksumming, Self-Healing, N-Mirrors, up to Triple-Parity, optionally mirrored boot medium

### ✓ Data Optimization

Very efficient compression algorithms, e.g., the default LZ4, and optional In-line Deduplication

### ✓ Data Acceleration

Two-level caching (SSD and RAM) to optimize the access time to the most recent and the most frequently used data, random writes are converted into sequential writes

### ✓ Data Virtualization

Thin and Over Provisioning with pooled storage model, unlimited and instant Snapshots and Clones

### ✓ Scalability

Up to about 5PB in single namespace with the ZFS technology on Linux OS

### ✓ Unified storage model

One storage supporting multiple protocols (file- and block-based) - iSCSI, FC and NFS, SMB (CIFS)

### ✓ Quick and simple storage management

Easy-to-use WebGUI with intuitive navigation, Console UI and scriptable CLI / API and REST API

### ✓ Convenient monitoring

Open-E JovianDSS monitoring system (on WebGUI, SNMP), as well as monitoring with industry-standard platforms like Nagios or Checkmk

### ✓ Flexible technical support options

Technical support provided by Open-E Partners or directly by Open-E's Support Team

### ✓ Robust storage environments and compatibility

Open-E JovianDSS Certified Storage Server Program - Partner systems tested, benchmarked and certified in our labs

## On- and Off-site Data Protection

**Open-E JovianDSS** combines several technologies to create the On- and Off-site Data Protection feature - a strategy for Backup and Disaster Recovery that allows an instant restore of crucial company data in case of an unexpected disaster. It enables consistent Snapshots for virtual machines and asynchronous replication to local or remote destinations. The rotational Snapshots are stored according to a retention-interval plan for flexible backup that can be customized to specific user needs. Additionally, Open-E JovianDSS with On- and Off-site Data Protection does not require any backup agent.

- ✓ Easy-to-use, efficient backups of mission-critical data
- ✓ Scalability and ability to store backups on separate servers on- and off-site to ensure maximum data security
- ✓ Optional instant disaster recovery with unparalleled flexibility - restore from a few minutes ago or a few years in the past if needed
- ✓ Provides data security and ensures Business Continuity in combination with a High Availability Cluster

## Advanced Metro HA Cluster

**Open-E JovianDSS** includes failover functionality for iSCSI, FC and NFS, SMB (CIFS) enabling you to set up High Availability Load-Balanced Storage Clusters that ensure reliability and redundancy through failover in case of a server crash. By using the Open-E JovianDSS Advanced Metro High Availability Cluster Feature Pack, you can create High Availability for two server nodes with storage mirror over Ethernet using a storage system at each location (Dual Storage). Since the connection of cluster communication and data mirroring between nodes works over Ethernet, the nodes might be located far from each other as a (stretched) metro storage cluster. It can be 50 miles (80 km) in case of point to point fibre optic connection, or even more when using an additional switch between nodes - provided that network latency will not exceed 5ms. The Feature Pack also supports configurations of the Open-E JovianDSS Standard HA Cluster Feature Pack.

- ✓ 1Gbps, 10Gbps, 40Gbps, 100Gbps Ethernet support for maximum speed
- ✓ Perfect for both rack (from 12" / 30cm) and metro (up to 50 miles / 80km) clusters
- ✓ Allows use of less expensive SATA drives
- ✓ Easy to configure and manage
- ✓ Compared to SAS or FibreChannel, JBODs are not required
- ✓ Optional use of RAID controllers

# Storage and Backup for Virtual Environments

Combined with VMware vSphere ESXi, Open-E JovianDSS is a cost-effective, flexible and scalable solution for virtualization that offers highest performance and data efficiency. The Open-E JovianDSS storage appliance can be provided as a physical data storage server or a Storage Virtual Appliance, accessed via the iSCSI or NFS protocol. Additionally, the storage has a built-in native backup and recovery functionality. The compatibility is confirmed through the "VMware Ready for Storage" certification, including the products ESXi 7.0, 6.7, 6.5, 6.0 and 5.5. The software also contains built-in VMware Tools, including VMware storage and network drivers.

- ✓ Storage appliance can be implemented either as a physical or as a virtual server
- ✓ Built-in functionality for creating and restoring backup copies on virtual machines
- ✓ Fast implementation and ease of use – installed as a storage for ESXi within minutes
- ✓ VMware Ready™ Storage certification
- ✓ Inexpensive, capacity-based product licenses and technical support options
- ✓ Accepted solution on the market – 95% of Open-E's customers use our software for virtualization with VMware

## Hyper-converged Storage Environments

Hyper-convergence is a software-defined way of storage management which combines storage, networking, compute, and virtualization technologies in only one physical unit. Hyper-converged environments with Open-E JovianDSS, used as a Storage Virtual Appliance (SVA), provide administrators with an integrated solution, including a cluster with one or more JBODs attached. This results in high performance, High Availability, and reliability for Enterprise setups as the HA cluster environment balances the load, and ensures uninterrupted service with failover in case one node fails. Due to only one required set of hardware per location such a solution is cost-effective and can be flexibly scaled when requirements grow.

- ✓ Reduced amount of total hardware - instead of four physical servers, only two are necessary to create an HA cluster
- ✓ Option to use commodity hardware which drastically reduces investment costs
- ✓ Easy to use interface and high performance through Software Defined Storage
- ✓ Flexibility and agility in virtualized environments with VMware or other hypervisors
- ✓ Cost-effectiveness and scalability

## Open-E JovianDSS specifications

Specifications	Description
Base OS	Linux
File system	ZFS
Architecture	64-bit
Minimum hardware requirements	Quad-core CPU 2.6GHz 16GB RAM HBA SAS / FC for standard clusters or SATA controller in case of Single Node or Cluster over Ethernet
Connections and storage protocols	1Gbps, 10Gbps, 40Gbps, 100Gbps Ethernet 40Gbps IP over InfiniBand iSCSI NFS v3 FC (Fibre Channel) SMB up to 3.1.1 / CIFS IPv4
Data integrity and availability	ZFS 256-bit block level checksums Mirror (eq. RAID 10), RAID-Z1, -Z2, (eq. RAID 5, 6), -Z3 On- and Off-site Data Protection Active-Active or Active-Passive dual node HA Cluster for iSCSI, FC and NFS, SMB (CIFS) Self-healing against silent data corruption Disk Multipathing RDMA
Data optimization	RAM, SSD and HDD hybrid pool Tiered Caching Unlimited Snapshots Unlimited Clones (writable Snapshots) Thin Provisioning Over Provisioning Inline Data Deduplication Inline Compression
Management	WebGUI, Console UI, CLI SNMP and REST API E-mail notification Roll-back to previous configuration
Examples of supported HA configurations	Cluster in a Box (CiB) Common Storage Cluster over SAS Cluster over SAS with internal SAS expander Cluster with multiple JBODs over SAS or FC (Stretched) Metro Cluster over Ethernet And more...
Supported environments	VMware, Microsoft Windows, Microsoft Hyper-V, Microsoft Active Directory, Citrix, Linux, RHEL, MacOS, XEN, OpenStack
Licensing and feature packs	One license per server Additional storage license depending on capacity Open-E JovianDSS Standard HA Cluster Feature Pack Open-E JovianDSS Advanced Metro HA Cluster Feature Pack

## About Open-E

Open-E is a well-established developer of IP-based storage management software. Its flagship product Open-E JovianDSS is a robust, award-winning storage application which offers excellent compatibility with industry standards, and is the easiest to use and manage. Additionally, it is of the most stable solutions on the market and undisputed price performance leader. Open-E accounts for over 37,000 installations world-wide and

has received numerous industry awards and recognition, also with its products Open-E DSS V7 and the free Open-E DSS V7 SOHO. Thanks to its reputation, experience and business reliability, Open-E has become the technology partner of choice for industry-leading IT companies. For further information about Open-E, its products and partners, visit [www.open-e.com](http://www.open-e.com)
