

## **IT support and Cloud provider implements flexible and secure solution for increased performance**

Simplicity Tech is an IT and Cloud technology company that provides concierge tech services to help businesses grow and prosper. They have been working with Open-E products since 2007 which provided them with backup and storage solutions for their customers in the dental and medical fields.

Due to their positive experiences in customer projects they decided to implement the ZFS-based Open-E storage into their very own IT environment.

The most crucial demand from Simplicity Tech was to have the ability to flexibly increase their storage capacity so as to tailor it to their Cloud customers' storage needs. Another important requirement was to have the certainty that the data is well protected in different geographical locations in order to help customers to comply with the HIPAA (Health Insurance Portability and Accountability Act) rules and regulations.

# Solution

Simplicity Tech has been using an acclaimed brand for the last 20 years and had looked at the Enterprise storage solutions that the vendor offered. It turned out that the costs were objectionable and the product's flexibility did not meet their needs. Plus, most of these solutions required high initial costs and did not provide any type of compression of the stored data.

The ZFS-based Open-E JovianDSS storage software is an Enterprise-class product that allowed Simplicity Tech to create thin-provisioned storage pools with a minimum amount of hardware initially. The storage capacity could be dynamically extended on request, without the need to move their crucial company data.

Open-E JovianDSS enabled a seamless replication between their US East and West coast data centers on LUN level thanks to the Advanced Metro High Availability Cluster Feature Pack which ensures reliability and high redundancy through failover. Additionally, with the On- and Off-site Data protection feature Simplicity Tech is able to set up backups in both the local and the remote locations.

## Customer feedback

Rick Baranowski, Director of IT

„We are absolutely satisfied with the implementation of the Open-E Cluster solution. Since the migration to the JovianDSS environment we have noted a 50% increase in performance for all the customers that we host. With this solution, we can see the storage growing and rest assured that in case we require more capacity, it will be just a matter of plugging in another storage chassis with an additional storage pool, not risking any downtime.“
