

Intel R2312GZ4GCSAS storage system

Executive summary

After performing all tests, the Intel Server System R2312GZ4GCSAS has been officially certified according to the Open-E Hardware Certification Program.

During the tests, it was found that the system is functional and efficient. With the Open-E DSS V7 operating system installed, the R2312GZ4GCSAS is stable and performs well.

In general, the system can be used for many different applications, but the following are recommended:

✓ iSCSI storage

The following features make the Intel Server System R2312GZ4GCSAS great iSCSI storage:

- Hardware RAID5, RAID50, RAID6 or RAID 60 for high performance and data safety.
- Two 10GbE interfaces for fast MPIO connection.
- Ten high class SATA hard drives provide a lot of storage space.
- SSD cache for faster access to frequently used blocks.

✓ NAS filer

The following features make Intel Server System R2312GZ4GCSAS a good NAS filer solution:

- Hardware RAID5, RAID50, RAID6 and RAID60 for fault tolerance and the most efficient use of available disk space.
- Ten high class SATA hard drives provide a lot of space for user files.
- Two 10GbE interfaces for independent connection to different networks or link aggregation for improved throughput.
- SSD cache for faster access to frequently used files.

✓ Storage for Virtualization

For this application the following can be used:

- Hardware RAID5, RAID50, RAID6 or RAID 60 for high performance and data safety.
- Four 1GbE interfaces for flexible network topology or fast MPIO connection.
- Two 10GbE interfaces for efficient network connections to virtualization platforms.
- SSD cache for I/O bottlenecks elimination and increased virtual machine density.

Certification notes

It's recommended to disable NUMA in BIOS to avoid stability issues. Raid 10 performance test was performed on eight drives. CacheCade test was performed on write through policy. It's not recommended to use Balance-rr bonding mode for link aggregation.

Network functionality

Tests performed in this section check the functionality, performance and stability of the network solutions available in the Open-E DSS V7 product on the certified system.

The tests rely on configuring the iSCSI targets and copying the data from many *Workstations with MS Windows* through various network connections with big block size using appropriate testing tools.

Network test topology

Network topology for Network testing is shown below.

RAID functionality

Tests performed in this section check the functionality, performance and stability of Open-E DSS V7 storage devices on the certified system.

Tests in this section rely on the creation of the RAID units on 0, 5, 6, 10, 50 and 60 levels, configuring the iSCSI target and copying the data from a *Workstation with MS Windows* via network connection with various block sizes using the lometer testing tool.

RAID test topology

Network test topology for RAID testing is shown below

SSD Cache with real life pattern test

1. Test description

The test relies on creating the iSCSI target on the certified system, writing (35%) and reading (65%) random data from a *Workstation with MS Windows* to it with various block sizes using the lometer tool.

2. Test results for SSD Cache with real life pattern and 10GbE Intel AXX10GBNIAIOM Dual Port I/O Module (i82599EB)

SSD Cache with real life pattern test results		
Block size [KB]	Performance [IOPS]	Performance test results
1	14013	passed
2	12026	passed
4	12300	passed
