

# Cloud Data Protection Service

open-e

Imagine you arrive at your office in the morning and find out that all your e-mails, customer and company data are gone. Your server has crashed and all files you have gathered over many years are lost forever. Bankruptcy seems unavoidable. To prevent this kind of scenario, the Cloud Data Protection Service is now available - for continuous data safety and fast recovery of your data (not the entire system), provided by the MSP (Managed Service Provider) of your choice.

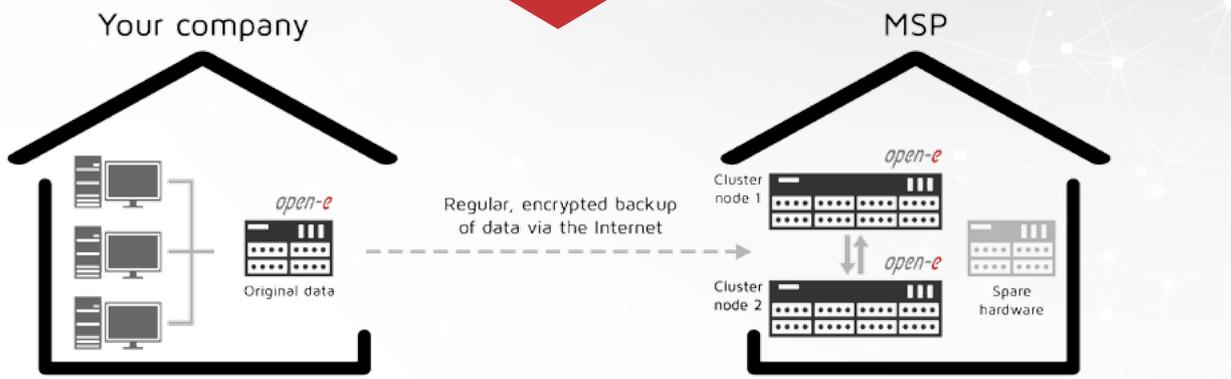

“ 94% of companies that experience data loss, file for bankruptcy.

University of Texas

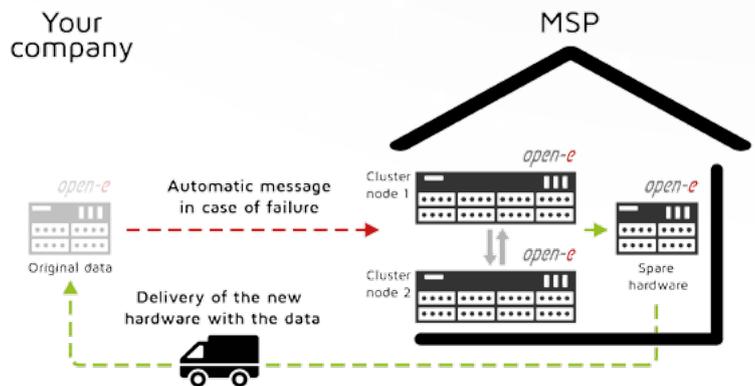

## Your data are secure

The concept of the Cloud Data Protection Service is simple: Your MSP installs a powerful Open-E NAS server at your location. Your data will be encrypted and transmitted online to your MSP on a regular basis (e.g. hourly). The data are saved continuously by your MSP which means that data that have been deleted accidentally can easily be restored.

## Quick and painless recovery

With the Cloud Data Protection Service you don't need to worry about any technical matters - everything is taken care of by the experienced specialists of your MSP. If your server fails for any reason, your MSP will receive an automated message and your files will be immediately restored on a new hard drive or server. As soon as all data is restored, the new hardware is delivered to you and installed on-site at once.

## No initial investment required

Installing a storage server can be an expensive business. Apart from facilities and staff members, setting up storage hardware and software often means a huge investment in keeping data available and safe. With the Cloud Data Protection Service, your MSP takes care of everything: experienced administrators, high-quality hardware and sophisticated and reliable storage software. Benefit from two options: either purchase or rent the hardware to benefit from flexible methods of payment.

## Leave all technical matters to your MSP

With the Cloud Data Protection Service you don't need to take care of any technical issues yourself or require costly IT staff - leave it all in the hands of your MSP. Experienced engineers are taking care of the systems from A to Z, including the initial setup of the hardware on your premises, continuous maintenance and of course advanced support in case of any data loss issues.

## Steady and affordable monthly fee

The Cloud Data Protection Service offers a full-service storage package at the fraction of the cost of a complete storage environment installed in your office. The monthly fee - depending on the storage space you are using - includes the installation of your new server on-site, leasing of hardware and software, as well as technical support.
